Management & Leadership > Systems & Planning

## Customer Reviews

If you want to understand how to manage the product in an agile way, you need this book. It's clearly written, with plenty of common sense. He discusses the value of features, not just the throughput. For too long the product owner role has been overloaded. Steve talks about a product management team. The product management team needs expertise: business, the product domain,

technology, and markets. (P 60 of the ebook.) If your product owner doesn't have all those skills (and it's not a crime if they don't), you need a product management team. Along with the ideas about roadmapping and thinking strategically and then thinking tactically to create and update the roadmap, this is a terrific book. It's not long, so you can read it in one sitting (which I think is great). I have more than 20 highlights--for me, the sign of a great book.

All PMs and PMMs need to read this book. This is a great blueprint for any company that sells software or services.

I've just finished chapter 1. And, it has brought so much clarity to me that I'm going to give it 5 stars before I even know what's going to happen next.
