Customer Reviews

In this technological generation, search engine optimization has become extremely critical for businesses that utilize Internet marketing. Getting on the first page of Google Search isn't just luck, it requires adept skill and knowledge. And this is the book that will definitely pave the way for people

who want to learn and master SEO. The book was written by four SEO experts: Eric Enge, Stephan Spencer, Rand Fishkin, and Jessie Stricchiola, who all successfully combine their ideas, knowledge, and experience together to contribute useful strategies and tactics that will certainly be useful and profound to the reader. What I really liked most was how the chapters of this book were laid out thoughtfully. It started off with an introduction of what is a search engine, which then immediately led into why search engines have become so important in today's marketing world and the simple psychology of how people search. Then the book is then followed with concrete basics and tools such as advice for specific SEO objectives, SEO planning, key-word knowledge, SEO tracking, SEO research and etc. Long story short, this book is perfect for someone who is vaguely familiar with SEO because this book takes one step by step so that everything is easy for the reader to digest and implement. The book embraces every topic and question an interested person may have about SEO. For example, if you are a business CEO or firm, they even include a chapter on deciding whether or not you want an SEO team in your office, or if you'd rather outsource it. My favorite parts of the book were the chapters that discuss the development of a SEO-friendly website and the creation of link-worthy content. These two chapters are extremely useful tools in helping someone who is building a website and wants to be noticed.
